Animal Wise by Virginia Morell: 9780307461452 ...

Animal Wise, written by science journalist Virginia Morell, is an engaging book describing current research in animal cognition. The science has come a long way in the past sixty years since Jane Goodall began to study chimpanzees in what is now the Gombe Stream National Park along the shores of Lake Tanganyika in Tanzania .

Animal Wise: The Thoughts and Emotions of Our Fellow ...

Animal Wise: The Thoughts and Emotions of Our Fellow Creatures is a non-fiction book on the subject of animal cognition and emotions by science writer Virginia Morell. The book was first published in 2013, and discusses the emotional and cognitive abilities of animals from octopi to earthworms, with a focus on dismantling the myth that animals react involuntarily or solely based on instinct.

Animal Wise Summary | SuperSummary

Animal Wise takes us on a dazzling odyssey into the inner world of animals and among the pioneering researchers who are leading the way into once-uncharted territory: the animal mind. Morell uses her formidable gifts as a storyteller to transport us to field sites and laboratories around the world, introducing us to animal-cognition scientists and their surprisingly intelligent and sensitive subjects.

What do animals think and feel? This question, which has long intrigued science writer and author Virginia Morell, is explored in her new book *Animal Wise*. Partly inspired by her 2008 National...

Looks at the interactions that have occurred between scientists and animal subjects and explains what is being discovered about how and what animals think and feel and the ethical questions that these new findings are raising.

Looks at the interactions that have occurred between scientists and animal subjects and explains what is being discovered about how and what animals think and feel and the ethical questions that these new findings are raising.

This biography of the "First Family" of anthropology reveals how their discoveries, collaborations, and rivalries contributed to our own knowledge of the origins of humankind. In this fascinating and authoritative work, acclaimed science writer Virginia Morell brings to vivid life the famous and infamous Leakey family, pioneers in the field of paleoanthropology: Louis Leakey, the patriarch, who persisted through initial scientific failures and scandal-ridden divorce to achieve spectacular success in digs throughout East Africa; Mary, his second wife, who worked alongside Louis as they made their outstanding discoveries at Olduvai Gorge and elsewhere; and Richard, their son, who ascended to the top of the field in his parents' wake, only to be threatened with both near-fatal illness and fierce professional rivalry. Morell transports us into the world of these compelling personalities, demonstrating how a small clan of highly talented and fiercely competitive people came to dominate an entire field of science and to contribute immeasurably to our understanding of the origins of humanity.

The Animal Intelligence Bundle: “Minds of Their Own” by Virginia Morell (March 2008) “Almost Human” by Mary Roach (April 2008) “The Genius of Swarms” by Peter Miller (July 2007) In “Minds of Their Own,” Virginia Morell provides an overview of the science of animal intelligence. She introduces you to an African gray parrot named Alex, a bonobo named Kanzi, and a border collie named Betsy. Each of these animals tells us something interesting about the way they perceive and manipulate their world. The article also looks at what scientists are learning about the intelligence of dolphins and crows, beyond mere communication. In “Almost Human,” Mary Roach takes us to the savannahs of Senegal to meet a group of 34 chimpanzees, whose behavior and social structures have given scientists some important clues about the nature of their communication and intelligence. In “The Genius of Swarms,” Peter Miller looks at the collective behavior of ants, bees, and other insects for what they can tell us about social organization and how sometimes intelligence lies outside of the individual brain. This article served as the basis for his book, *The Smart Swarm: How Understanding Flocks, Schools, and Colonies Can Make Us Better at Communicating, Decision Making, and Getting Things Done*.

A fascinating guide to a career in marine biology written by bestselling journalist Virginia Morell and based on the real-life experiences of an expert in the field—essential reading for someone considering a path to this profession. For the last two decades, Dr. Robin Baird has spent two months out of each year aboard a twenty-four-foot Zodiac boat in the waters off the big island of Hawai'i, researching the twenty-five species of whales and dolphins that live in the Pacific Ocean. His life may seem an impossible dream—but his career path from being the first person in his family to graduate college to becoming the leading expert on some of Hawai'i's marine mammals was full of twists and turns. Join Baird aboard his Zodiac for a candid look at the realities of life as a research scientist, from the ever-present struggles to secure grants and publish new data, to the joys of helping to protect the ocean and its inhabitants. You'll also learn pro tips, like the unexpected upsides to not majoring in marine biology and the usefulness of hobbies like sailing, birdwatching, photography, and archery. (You'll need good aim to tag animals with the tiny recording devices that track their movements.) *Becoming a Marine Biologist* is an essential guide for anyone looking to turn a passion for the natural world into a career. This is the most valuable informational interview you'll have—required reading for anyone considering this challenging yet rewarding path.

From the time of our earliest childhood encounters with animals, we casually ascribe familiar emotions to them. But scientists have long cautioned against such anthropomorphizing, arguing that it limits our ability to truly comprehend the lives of other creatures. Recently, however, things have begun to shift in the other direction, and anthropologist Barbara J. King is at the forefront of that movement, arguing strenuously that we can—and should—attend to animal emotions. With *How Animals Grieve*, she draws our attention to the specific case of grief, and relates story after story—from fieldsites, farms, homes, and more—of animals mourning lost companions, mates, or friends. King tells of elephants surrounding their matriarch as she weakens and dies, and, in the following days, attending to her corpse as if holding a vigil. A housecat loses her sister, from whom she's never before been parted, and spends weeks pacing the apartment, wailing plaintively. A baboon loses her daughter to a predator and sinks into grief. In each case, King uses her anthropological training to interpret and try to explain what we see—to help us understand this animal grief properly, as something neither the same as nor wholly different from the human experience of loss. The resulting book is both daring and down-to-earth, strikingly ambitious even as it's careful to acknowledge the limits of our understanding. Through the moving stories she chronicles and analyzes so beautifully, King brings us closer to the animals with whom we share a planet, and helps us see our own experiences, attachments, and emotions as part of a larger web of life, death, love, and loss.

In a world where we usually measure animals by human standards, prize-winning author and MacArthur

Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the last great elephant gatherings, then follow wolves of Yellowstone National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.

Published in hardcover as *What the dog knows: the science and wonder of working dogs* by Simon & Schuster, New York, c2013.

In 2009, Marc Bekoff was asked to write on animal emotions for *Psychology Today*. Some 500 popular, jargon-free essays later, the field of anthrozoology — the study of human-animal relationships — has grown exponentially, as have scientific data showing how smart and emotional nonhuman animals are. Here Bekoff offers selected essays that showcase the fascinating cognitive abilities of other animals as well as their empathy, compassion, grief, humor, joy, and love. Humpback whales protect gray whales from orca attacks, combat dogs and other animals suffer from PTSD, and chickens, rats, and mice display empathy. This collection is both an updated sequel to Bekoff's popular book *The Emotional Lives of Animals* and a call to begin the important work of "rewilding" ourselves and changing the way we treat other animals.

From one of the world's leading authorities on animal behavior, the astonishing story of how the brain drives the evolution of beauty in animals and humans In *A Taste for the Beautiful*, Michael Ryan, one of the world's leading authorities on animal behavior, tells the remarkable story of how he and other scientists have taken up where Darwin left off, transforming our understanding of sexual selection and shedding new light on animal and human behavior. Drawing on cutting-edge science, Ryan explores key questions: Why do animals perceive certain traits as beautiful and others not? Do animals have an inherent sexual aesthetic and, if so, where is it rooted? Ryan argues that the answers lie in the brain—particularly of females, who act as biological puppeteers, spurring the development of beautiful traits in males. Vividly written and filled with fascinating stories, *A Taste for the Beautiful* will change how you think about beauty and attraction in the animal world and beyond.
