It needs some "magic potion". Add 4 tablespoons/a splash of vinegar to the baking soda and water. The mixture should fizz and bubble, but if it does not fizz or bubble add a bit more vinegar. Allow the students to observe what they have done. The pasta begins to float up and then down in the water and it appears as though the spaghetti is dancing!

Spaghetti Bridge Lab Students find a relationship between the number of spaghetti strands making a "bridge" and the largest number of masses that can be supported. This activity provides a great environment for discussing independent, dependent and control of variables. Students should also graph their data and write an equation for the graph.

Introduction: Dancing Spaghetti. A simple solution to moving pices of spaghetti from bottom to surface. Add Tip Ask Question Comment Download. Step 1: Materials You'll Need. You need the following materials for this experiment: 1- Vinegar. 2- Some piece spaghetti with 2 - 3 cm.

[Dancing Spaghetti : 5 Steps - Instructables](#)

From doing the Dancing Spaghetti Lab, I learned that if you mix water, vinegar, and baking soda, it create CO2 bubbles. I found a number of things to be interesting. For example, I found that the water and vinegar solution fizzes up when you add baking soda to it; also that amateur video editing is quite time consuming (trying to figure out the features ie: sound, brightness, filters, etc.), yet relaxing in a way.

Dancing Spaghetti. In this chemistry activity, learners use spaghetti to explore density and chemical reactions. Learners will discover how a solution of baking soda and vinegar can make spaghetti float and even "dance" in water, whereas it usually sinks. This resource guide includes the formula for the reaction between vinegar and baking soda as well as quick extension ideas.
