Behavior. Giraffes prefer to feed in the morning and afternoon hours to have maximum visibility to keep aware of predators. They rest in several positions, sometimes they just stand still, while others they lie on the ground with their four legs bent and their heads straight watching around.

Giraffe Social Structure - Giraffe Facts and Information
Giraffe Conservation. Giraffes are native to Africa, but years ago they roamed in regions that covered extensive areas of that continent. Today, if we look at a map of the distribution of species and subspecies of giraffes, we can notice how reduced, fragmented and separated their populations are. Some subspecies have populations in the wild so reduced that in a few decades they will probably be part of the extinct fauna of the Earth.

Anne Innis Dagg - Wikipedia
Understanding how giraffes (*Giraffa camelopardalis*) communicate is a topic that has intrigued biologists, ecologists, and society for many years. Despite this interest, communication remains one of the most understudied aspects of giraffe ecology. We reviewed published papers that referenced giraffe communication across olfactory,
