This book is a printed edition of the Special Issue "Systems Education for a Sustainable Planet" that was published in Systems

This book challenges universities to rethink their missions and to re-structure courses, research programs, and campus life in terms of sustainability. The author offers valuable theoretical and practical resources for students, teachers, researchers, and administrators who seek sustainability in higher education. Sustainability is explored as an outcome and a process of learning, and also as a catalyst for educational change and institutional innovation.

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

Systems Thinking, System Dynamics offers readers a comprehensive introduction to the growing field of systems thinking and dynamic modelling and its applications. The book provides a self-contained and unique blend of qualitative and quantitative tools, step-by-step methodology, numerous examples and mini-cases, as well as extensive real-life case studies. The content mix and presentation style make the otherwise technical tools of systems thinking and system dynamics accessible to a wide range of people. This book is intended as a text for students in diverse disciplines including business and management, as well as the social, environmental, health and applied sciences. It also has particular relevance for professionals from all backgrounds interested in understanding the dynamic behaviour of complex systems, change management, complex decision making, group problem solving and organisational learning. Systems thinking and system dynamics provide a scientific paradigm, a set of tools and computer technology which can help explain the forces and dynamics that underlie change and complexity in business, political, social, economic and environmental systems. Using systems thinking and system dynamics makes it possible to: examine and foresee the consequences of policy and strategic decisions implement fundamental solutions to chronic problems avoid mistakenly interpreting symptoms as causes test assumptions, hypotheses and scenarios boost staff morale and improve productivity improve the stability and performance of supply chains find long-term sustainable solutions and avoid "fire-fighting" behaviour.

This is a scholarly study of the origin and evolution of the Kabbalah. Originally published in French in 1843, with a second French edition in 1889, this book traces the origins of the philosophical concepts of the Kabbalah to the ancient Zoroastrians. Franck goes into fascinating detail about the doctrine of the Kabbalah, as expressed in the Sepher Yetzirah and the Zohar. He uses internal evidence to trace the origins of these texts many centuries prior to their first known publication in the thirteenth century C.E. Franck carefully compares the philosophy of the Kabbalah with Greek philosophy, the Alexandrians, Philo, and the Gnostics, and concludes that, although there are similarities, none of them can claim to be the source of the Kabbalah. However, he does find many more similarities with the ancient Zoroastrian beliefs. By this process of elimination, he comes to the conclusion that the doctrines of the Kabbalah had their origin during the Babylonian exile circa 500 B.C.E., which was also the time when Zoroaster was active in the same geographical region. This thesis is worth considering, and potentially adds more weight to the already numerous contributions of Zoroastrianism to world culture.

Concentrating on the post-Vatican II revisions of its teachings, this book tells the story of the destruction of the Roman Catholic tradition, a defining event of the twentieth century.
