a learning system that wants something, that adapts its behavior in order to maximize a special signal from its environment. This was the idea of a "he-donistic" learning system, or, as we would say now, the idea of reinforcement learning. Like others, we had a sense that reinforcement learning had been thor-

In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes.

Welcome to this project. It is a tiny project where we don't do too much coding (yet) but we cooperate together to finish some tricky exercises from famous RL book Reinforcement Learning, An Introduction by Sutton. You may know that this book, especially the second version which was published last year, has no official solution manual.

Reinforcement Learning: An Introduction

The book has a nice ansatz in that it is a comprehensive review of current techniques in reinforcement learning. However, the 1st edition is not recommended, it glances over a lot of mathematical details and displays them not very well. The 2nd edition does a way better job at this and actually shows some calculations in modern notation.
