A fresh take on undergraduate medical revision: concise lectures, realistic clinical cases, applied self-assessment

PulseNotes | Respiratory notes
Respiratory revision notes covering key respiratory conditions including asthma, COPD, pneumonia and more. Clinical Examination A comprehensive collection of clinical examination OSCE guides that include step-by-step images of key steps, video demonstrations and PDF mark schemes.

Respiratory medicine | Geeky Medics
The functions of the respiratory system are: Oxygen supplier. The job of the respiratory system is to keep the body constantly supplied with oxygen. Elimination. Elimination of carbon dioxide. Gas exchange. The respiratory system organs oversee the gas exchanges that occur between the blood and the external environment. Passageway.

Respiratory System Anatomy and Physiology - Nurseslabs
Respiration Revision Notes: 12.1) Respiration. 12.2) Aerobic respiration. 12.3) Anaerobic respiration. Aerobic respiration, Link reaction. Anaerobic respiration – Ethanol and Lactate pathways. ATP yield in aerobic and anaerobic respiration. Respiration, Glycolysis. Summary of Energy and Respiration.

12. Respiration Revision Notes - A Biology*
The respiratory system is responsible for gaseous exchange and breathing so that oxygen is taken into the body and carbon dioxide is released from the body. Mammals including humans need oxygen in order to live. The oxygen is taken into cells and combined with glucose resulting in the production of energy in a process called respiration.

The respiratory system and gaseous exchange - Free ZIMSEC ...
There are two types of respiration: 1) Aerobic respiration. 2) Anaerobic respiration. 3 . Aerobic respiration is the process of breaking down food in living cells to release a large amount of energy in the presence of oxygen. 4 .

8. Respiration • A Biology*
Comprising of best of five test multiple choice questions and revision notes to facilitate targeted study, Revision Notes for the Respiratory Medicine Specialty Certificate Examination is the only book you need to prepare for this important examination. Questions are based around clinical scenarios and supplemented with images of radiological investigations such as x-rays, and lung function tests.

The rate of blood flow can be calculated if the volume of blood flow and the time is known; For example; if 2460 ml of blood flows through a blood vessel in 4 minutes, the rate of blood flow = volume of blood / number of minutes = 2460 / 4 = 615 ml/minute; From this you may be asked to determine how much blood flows through the same vessel in one hour = rate of blood flow (ml/min) x 60 = 615 x ...

Blood Vessels & Blood | AQA GCSE Biology Revision Notes
The aim should be a peak flow >75% of best or predicted with a diurnal variability <25% before discharge (unless agreed otherwise by a respiratory clinician). Follow-up All patients with a peak flow <50% of best or predicted on admission require prednisolone 40-50 mg/day until recovery with a minimum of five days.
