In many penetration tests, there is a lot of useful information to be gathered from the radios used by organizations. These radios can include two-way radios used by guards, wireless headsets, cordless phones and wireless cameras. Wireless Reconnaissance in Penetration Testing describes the many ways that a penetration tester can gather and apply the information available from radio traffic. Stopping attacks means thinking like an attacker, and understanding all the ways that attackers gather information, or in industry terms profile, specific targets. With information from what equipment to use and how to find frequency information, to tips for reducing radio information leakage, to actual case studies describing how this information can be used to attack computer systems, this book is the go-to resource for penetration testing and radio profiling. Author Matthew Neely is a respected and well-known expert and speaker on radio reconnaissance and penetration testing Includes real-world case studies of actual penetration tests using radio profiling Covers data leakage, frequency, attacks, and information gathering

This book looks at network security in a new and refreshing way. It guides readers step-by-step through the "stack" -- the seven layers of a network. Each chapter focuses on one layer of the stack along with the attacks, vulnerabilities, and exploits that can be found at that layer. The book even includes a chapter on the mythical eighth layer: The people layer. This book is designed to offer readers a deeper understanding of many common vulnerabilities and the ways in which attacker's exploit, manipulate, misuse, and abuse protocols and applications. The authors guide the readers through this process by using tools such as Ethereal (sniffer) and Snort (IDS). The sniffer is used to help readers understand how the protocols should work and what the various attacks are doing to break them. IDS is used to demonstrate the format of specific signatures and provide the reader with the skills needed to recognize and detect attacks when they occur. What makes this book unique is that it presents the material in a layer by layer approach which offers the readers a way to learn about exploits in a manner similar to which they most likely originally learned networking. This methodology makes this book a useful tool to not only security professionals but also for networking professionals, application programmers, and others. All of the primary protocols such as IP, ICMP, TCP are discussed but each from a security perspective. The authors convey the mindset of the attacker by examining how seemingly small flaws are often the catalyst of potential threats. The book considers the general kinds of things that may be monitored that would have alerted users of an attack. \* Remember being a child and wanting to take something apart, like a phone, to see how it worked? This book is for you then as it details how specific hacker tools and techniques accomplish the things they do. \* This book will not only give you knowledge of security tools but will provide you the ability to design more robust security solutions \* Anyone can tell you what a tool does but this book shows you how the tool works

This book translates knowledge about persuasion into evidence-based principles. Useful knowledge about persuasion has been obtained over the last 100 years from the experience of advertising experts and from empirical studies in advertising and other fields including psychology, consumer behavior, law, mass communication, politics, and propaganda. The principles in Persuasive Advertising provide understandable and easy-to-access guidance for all types of advertising, including still media such as print and Internet, and motion media such as TV, streaming video, Internet, and radio. They also apply to other types of persuasive communications such as management reports, speeches, and press releases. Wharton School Professor J. Scott Armstrong spent over 16 years on this book. In recent years, he was assisted by Gerry Lukeman, Chairman Emeritus of Ipsos-ASI and Sandeep Patnaik, Research Director at Gallup and Robinson. Altogether, more than 80 people contributed to Persuasive Advertising by obtaining relevant studies, analyzing data, editing and reviewing, and surveying researchers to ensure that the book correctly summarizes their findings. Persuasive Advertising summarizes findings from about 3,000 empirical studies and 50 books. It also presents new findings from previously unpublished studies. Along with the AdPrin Audit software on AdPrin.com, Persuasive Advertising enables advertisers as well as agencies to quickly and inexpensively identify ways to improve ads - or to determine which of a set of ads will be most effective. For example, it typically requires about an hour for an experienced user to obtain a persuasiveness index for a print ad along with a list of ways to improve the ad. By using these principles, advertisers can improve their creativity and effectiveness. This book is supported by the AdPrin.com site: <http://advertisingprinciples.com/>
